Woman: Society, Sex & Law

Woman was, is, will issue in every field everywhere. Everywhere woman is a good source of earning in priority of lot of people like journalist, philosophers, writers, lawyers, judges, social reformers, politicians. Even woman does spare the chance to exploit the woman and the womanhood. Everywhere in every country every year a new law is made for woman's so called welfare, protection and empowerment. The same with judiciary a judgment is given i her so called favor.

Every law and judge say woman should be treated equally. It is alright to say she should treated equally at that the same time is she is equal to man? Today there is common saying man and woman is equal. Are they really equal? If they are equal then why human being divided into two species one is man and other is woman. No doubt one faction of society s they woman is equal to man except biologically. We cannot disregard this view but one thing is clear woman is made sufferer or serving class. Due to her biology she is subject to restrictions. Restrictions are not imposed by people only (as most of people say restrictions on woman are imposed by society only) but also by nature and her biology. There is no doubt society cannot be imagined without a think like a woman but I don't know why nature or god or science shift whole burden on one species i.e. woman.

People talk generally an era will come when man will give birth to child. This statement seems really confusing because if that happens it means situation will be same as it today except then "man" word would be replaced by "woman" and vice-versa. In that case in treatise also the word "man" would be required to replace by word "woman" and vice-versa.

Today, I think in ever age, if "woman of girl" word appear anywhere to the man then a special, may be sexual, arises in his mind (it may be due to act of spinal cord inst simultaneously without any deliberation or thinking. Vice-versa may be possible but I can't

say anything regarding this with confidence. But I think degree of sexual desire might be more in man than woman. I heard lot of people, I assume them intelligent intellectuals, woman has more sexual power than man. They also substantiate this fact citing an Indian practice and law. As in India the marriageable age of woman is eighteen years but of twenty-one years. Here I want to differentiate sexual desire and sexual power, as it may be possible man possess more sexual desire and woman possess more sexual power. It is also said woman vests with more sexual power but at the same time woman is given more controlling power.
